## Configuration

Stores → Configuration → Mavenbird Extensions → Reindex

The screenshot shows the Magento2 Configuration interface. At the top, there's a search bar and a 'support' link. Below this, a 'Scope' dropdown is set to 'Default Config'. A 'Save Config' button is on the right. On the left, a sidebar lists configuration sections: GENERAL, SECURITY, CATALOG, CUSTOMERS, SALES, and MAVENBIRD EXTENSIONS. The 'MAVENBIRD EXTENSIONS' section is expanded, showing 'Reindex'. The main content area is titled 'About Mavenbird Reindex'. It includes a breadcrumb trail: 'Configuration > System > Tools > Index Management'. Below this, there's a 'Strategy [global]' label and a dropdown menu with three options: 'Standard' (selected), 'Standard', and 'Deferred'.

- The title "About Mavenbird Reindex" is displayed.
- There is a "Configuration" link pointing to "System > Tools > Index Management."
- An option labeled "Strategy [global]" with a dropdown menu that currently shows "Standard" as the selected option. The dropdown has two options: "Standard" and "Deferred."

Indexing is a process that Magento 2 uses to update data efficiently in various tables. When changes are made to data, such as product prices, categories, or attributes, the data in the database must be reindexed so that it is accurate and up-to-date.
